

# HydroChem SA

Bringing chemistry and innovation to water treatment

HydroChem is Australia's leading water treatment services company. Established in 1977, HydroChem uses chemistry and innovation to deliver customised solutions for commercial and industrial sites.

Employing over 200 people, HydroChem has branch offices and warehouses throughout Australia. Our agile supply chain, from R & D to manufacturing combined with 13 depots across Australia, means timely and efficient product delivery.

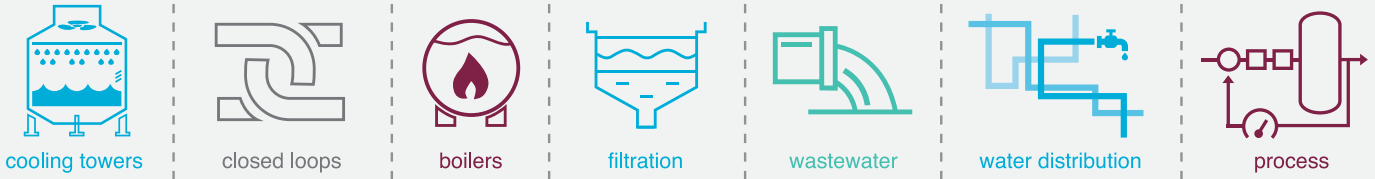

In South Australia, our local technicians specialise in delivering reliable water treatment services to ensure the efficiency and longevity of your assets, making it safe for the community and the environment.

Our customers can rely on us for our exacting standards and focused approach. We set ourselves apart using our technical expertise and innovation in water chemistry, making water treatment smarter. Our people care about your water.

## HydroChem service standard

# Making water treatment smarter

HVAC and

Industrial Services

## Maintenance

HydroChem has 150 water treatment technicians servicing over 6,500 commercial and industrial sites across Australia. Our skilled technicians are in the field every day of the week, analysing water chemistry and microbial results, making it safe for the community and the environment.

## Asset management

Our technicians are skilled at managing asset efficiency and plant operation by improving reliability and maintaining clean heat exchange surfaces.

## Trusted advisor

HydroChem has established a reputation in balancing compliance, sound risk mitigation and finding cost-effective sustainable solutions through our customer partnerships.

Trusted strategic partners in business, HydroChem is focussed on reaching customer goals. We offer a set of best practice checks and recommendations in areas including safety, sustainability, wastewater practises and management.

## Risk management and compliance

Our risk assessment team develop Legionella risk management plans for cooling towers involving inspection, maintenance, servicing, chemical analysis and microbial testing. We help customers adhere to environmental compliance enforced by local water authorities and councils.

## Clarity digital innovation

Clarity, our cloud-based platform, provides free visual reports using customer data. Clarity collates data across a range of categories to assess how water systems are performing, making water treatment smarter.

## In-house R & D

Our team of Chemists develop innovative solutions and product formulation to improve plant reliability and performance in our own laboratory. HydroChem is a proud technical partner with Kurita Japan Water Industries, a global leader in water treatment technology.

## Chemistry and equipment

HydroChem produce over 350 chemistries such as corrosion inhibitors, scale inhibitors and biocides in our manufacturing plant and supply 400 products including dosing equipment, pumps and filters.

Our agile supply chain, from R & D to manufacturing combined with 13 depots across Australia, means timely and efficient product delivery.

## Water hygiene

Our Hygiene team specialise in managing water hygiene in water distribution systems. We ensure that your assets provide a safe and continual supply of steam, cooling water, chilled water and hot water.
